

Myntra Seller API

Version: 2.0

Changes from v1:

- Order APIs take sku instead of orderLineId.
- Added confirmOrder API
- Added GST based changes in updateTax and ReadyToDispatch
- Corrected missing a braces for status response.
- Changed Return status names.
- Added summary of success and error codes at the bottom.
- Added Price Update API
- Added Catalog Attribute Sheet Status API - Only for sellers using FTP for sharing attribute sheet upload.
- Changed the URL format for the APIs. Now version comes after the "seller" part - ("seller/v2")

- Note:
- Inbound Calls
 - Authentication
 - Obtain Auth token
 - Catalog Attribute Sheet Status
 - Lot Details
 - Price Update
 - Price Update
 - Job Monitoring
 - Discounts
 - Update Discount
 - Inventory
 - Update Inventory
 - Search Inventory
 - Order Updates
 - Confirm Order
 - Update Tax
 - Ready To Dispatch (RTD)
 - Cancel Order Line
 - Order Search and Document Download
 - Get Order by Id
 - Download Shipping Label
 - Logistics
 - Verify Shipments
 - Get Manifest
 - Tracking Updates
- Outbound Calls
 - Order
 - Create Order
 - Update Order
 - Download Invoice
 - Return
 - Return state transition diagram
 - Create Return
 - Update Return
 - Return Delivered
 - Return Cancelled
 - Return Ready For Pickup

Note:

- You will have to ignore attributes other than those defined below that you receive in the request/response.
- The "sku" attribute in the APIs is the seller sku code.
- The timezone of date attributes are IST by default.
- Status codes are NOT Http Codes; Http Response code is 200 by default unless explicitly specified.
- Currently Shipments correspond one-to-one with Orders and have the same identifier. i.e. you may pass orderId as shipmentId.

Inbound Calls

These are the set of APIs which sellers can invoke on Myntra marketplace system

Authentication

Obtain Auth token

Endpoint	https://partnerapi.myntra.com/v1/authenticate																	
Http Method	POST																	
HttpHeader	base64 encoded <username>~<username>:<password> in the Basic Authorisation																	
Description	<p>This API should be used by the seller to submit the username and password to receive the auth token, which is required in the header to invoke all the other seller APIs.</p> <p>The token may be used for at most 30 days after which the API will throw a 401 . It is advised to code in such a way that when a 401 is thrown for any API, this API is called to retrieve the latest token.</p>																	
Sample Http Header	Authorization: Basic dkdk323dssssddffr32233333223==																	
Response	<table><tr><th>Param</th><th>DataType</th><th>Description</th></tr><tr><td>authToken</td><td>String</td><td>The auth token which is a required header for all further API calls.</td></tr><tr><td>StatusCode</td><td>int</td><td>Refer to the status code section below</td></tr><tr><td>StatusMessage</td><td>String</td><td>Will have either success or the appropriate error message in case of error.</td></tr><tr><td>StatusType</td><td>ENUM</td><td>SUCCESS, ERROR</td></tr></table>			Param	DataType	Description	authToken	String	The auth token which is a required header for all further API calls.	StatusCode	int	Refer to the status code section below	StatusMessage	String	Will have either success or the appropriate error message in case of error.	StatusType	ENUM	SUCCESS, ERROR
Param	DataType	Description																
authToken	String	The auth token which is a required header for all further API calls.																
StatusCode	int	Refer to the status code section below																
StatusMessage	String	Will have either success or the appropriate error message in case of error.																
StatusType	ENUM	SUCCESS, ERROR																
Sample Response	<pre>{ "status": { "statusCode": 1000, "statusMessage": "Token retrieved successfully", "statusType": "SUCCESS" }, "data": { "authToken": "dajsdjhfkjdhsjkjahfdkjahsdfkjhakfhdkksajhfalsdkfkjdshfkjdhadkjfds" } }</pre>																	
Status Codes	<table><tr><th>Status Code</th><th>Status Type</th><th>Case</th></tr><tr><td>1000</td><td>SUCCESS</td><td>Success</td></tr><tr><td>401</td><td>ERROR</td><td>Unauthorised</td></tr></table>			Status Code	Status Type	Case	1000	SUCCESS	Success	401	ERROR	Unauthorised						
Status Code	Status Type	Case																
1000	SUCCESS	Success																
401	ERROR	Unauthorised																

Catalog Attribute Sheet Status

Lot Details

Endpoint	<a href="https://partnerapi.myntra.com/seller/v2/catalog/lot/<lotname>">https://partnerapi.myntra.com/seller/v2/catalog/lot/<lotname>

Tracking Updates

Description	This API will be used to update the status of shipments for an order.
Endpoint	https://partnerapi.myntra.com/logistics/shipment/tracking/update
HTTP Method	POST
HTTP Header	Authorization: <authToken> Content-Type : "application/json" Accept : "application/json"

Request Body				
	Parameter	Data Type	Mandatory	Description
	shipmentId	String	Y	Mandatory for updates from other partners. This is the order id.
	shipmentType	ENUM	Y	{ DL // Normal Forward Shipments i.e. seller to customer }
	eventTime	DateTime	Y	Format: yyyy-MM-dd HH:mm:ss
	event	Enum	Y	{ IN_TRANSIT, LOST }
	eventLocation	String	Y	maxLength: 256 characters
	remarks	String	N	maxLength: 512 characters
<p>Sample Update Request:</p> <pre> { "shipmentId":12323233, "shipmentType" : "DL", "event" : "OUT_FOR_DELIVERY", "eventTime" : "2016-11-17 10:11:01", "eventLocation" : "Bangalore", "remarks" : "Shipment is out for delivery." } </pre>				

Response Params	Param	Datatype	Description
	statusMessage	string	Success message or appropriate error message in case of an error
	statusType	string	Will denote if the request was completed successfully or not
	statusType	string	Will denote if the request was completed successfully or not
HTTP Status Code	<p>SUCCESS: 200</p> <p>UNAUTHORISED: 401</p> <p>ERROR: Any other code</p>		

Sample Success Response	<p>End user needs to check statusType in the response.</p> <pre> { "status": { "statusCode": 3, "statusMessage": "Success", "statusType": "SUCCESS", "totalCount": 0 }, "data": null } </pre>
Error Scenarios	End user will need to perform retries in case of error.

Outbound Calls

These are the API which Myntra will invoke on the seller systems.

Order

Create Order

Endpoint	https://<seller-domain>/v2/order/{orderId} - As provided by seller
Http Method	POST
HTTPHeader	As per seller authentication rules
Description	To push an order from Myntra marketplace to the seller systems

Request Params				
	Param	DataType	Description	Field Length
	Order	Object	Contains all the fields listed below	
	id	string	The order Id, this will be the identified for every seller order captured by myntra and will be required in any order update calls there after.	20
	orderLineEntries[]	List	Contains the list of order line items. Each order item structure has the highlighted properties	
	id	long	The identifier corresponding to each one of the line items in the order.	20
	orderId	string	The orderId of this order line	20
	sku	string	The seller SKU code for which order was placed.	128
	totalQuantity	int	The quantity of the item purchased	11
	cancelledQuantity	int	The quantity of this line which has been cancelled	11
	mrp	double	The mrp of the line item	12,2
	totalSellerDiscount	double	Seller funded discount	12,2
	totalMarketplaceDiscount	double	Marketplace funded discount	12,2
	totalPaymentReceived	double	Payment already collected from the customer for this line	12,2
	cancellationReason	string	one of CustomerInitiated, Myntra initiated or seller failed to supply	128
	customizedMessage	string	Any extra information as JSON Object. Eg: For gift personalization - gift card service id can be passed as a attribute.	Free Text
	shippingCharge	Double	The shipping charge applicable on this order	12,2
	giftCharge	Double	Gift charges applicable on the order	12,2
	amountDue	Double	Amount to be paid by the customer, post all the discounts and payments	12,2
	warehouse	String	The seller warehouse code to which the order is assigned	50
	receiverName	string	The name of the receiver of the order	128
	address	string	The first two lines of shipping address manually entered by the customer	Free Text
	city	string	The customer city	64
	locality	string		255
	state	string		64
	country	string		64
	zipCode	string		10
	mobile	string	The mobile number provided by the customer	64
	orderDate	Date	The order creation date	format : "yyyy-MM-dd HH:mm:ss"
	cancellationReason	String	one of CustomerInitiated, Myntra initiated or seller failed to supply	128
	onHold	bool	This flag indicates if the order was placed on hold on our end for some reason	1
	shippingMethod	string	Either normal, SameDayDelivery or NextDayDelivery	100
	expectedDeliveryTime	Date	The expected delivery date to the customer	format : "yyyy-MM-dd HH:mm:ss"
	processingStartTime	Date	The time after which warehouse processing can start for this order	format : "yyyy-MM-dd HH:mm:ss"
	processingCutOffTime	Date	The time before which processing has to be complete and order needs to be available for dispatch	format : "yyyy-MM-dd HH:mm:ss"
	paymentMethod	String	on for online and cod for cod	10
	courierCode	string	The courier code to which this order has been assigned.	10
Response Params				
	Param	DataType	Description	
	StatusCode	int	Refer to the status code section below	
	StatusType	ENUM	SUCCESS, ERROR	
	StatusMessage	string	Will have either success or the appropriate error message in case of error.

Fields Description	Same as of in create api.											
Sample Response	<pre>{ "status": { "statusCode": 1008, "statusMessage": "Order updated successfully", "statusType": "SUCCESS" } }</pre>											
Status Codes	<table><tr><th>Status Code</th><th>Status Type</th><th>Case</th></tr><tr><td>1008</td><td>SUCCESS</td><td>Order update successfully</td></tr><tr><td>3002</td><td>ERROR</td><td>Error while updating order</td></tr></table>			Status Code	Status Type	Case	1008	SUCCESS	Order update successfully	3002	ERROR	Error while updating order
Status Code	Status Type	Case										
1008	SUCCESS	Order update successfully										
3002	ERROR	Error while updating order										

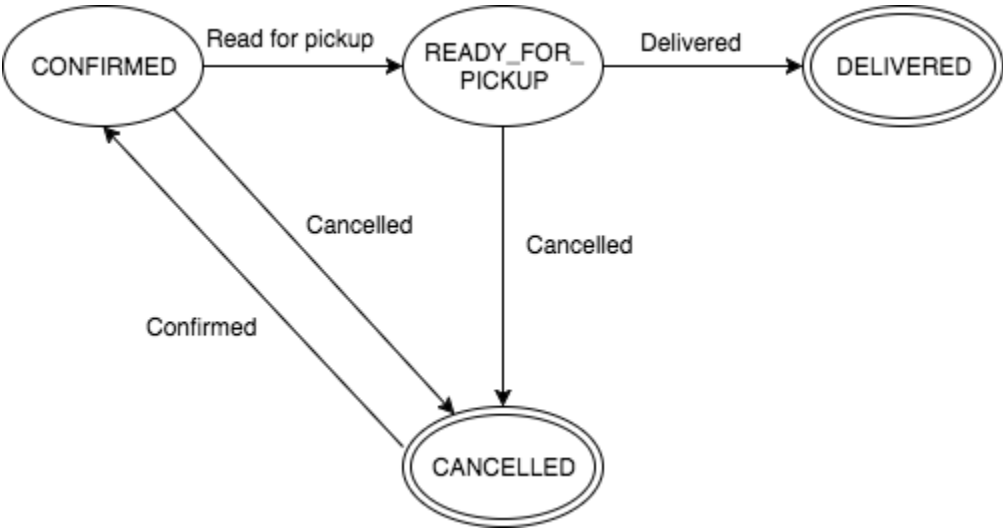

Download Invoice

Endpoint	https://<seller-domain>/v2/mynta/downloadinvoice/{orderId}																							
Http Method	GET																							
HttpHeader	As per seller authentication rules																							
Description	The invoice api returns a PDF file as byte stream for the requested orderId																							
Path Param	orderId																							
Request Params	NA																							
Response Params	<p>Success :</p> <p>PDF byte stream with Content-Type "application/pdf"</p> <p>Error:</p> <table><tr><th>Param</th><th>DataType</th><th>Description</th></tr><tr><td>StatusCode</td><td>int</td><td>Refer to the status code section below</td></tr><tr><td>StatusType</td><td>ENUM</td><td>SUCCESS, ERROR</td></tr><tr><td>StatusMessage</td><td>string</td><td>Will have either success or the appropriate error message in case of error.</td></tr></table> <table><tr><th>Status Code</th><th>Status Type</th><th>Case</th></tr><tr><td>4006</td><td>ERROR</td><td>No Invoice to download for this Order</td></tr><tr><td>200</td><td>SUCCESS</td><td>Invoice generated successfully</td></tr></table>			Param	DataType	Description	StatusCode	int	Refer to the status code section below	StatusType	ENUM	SUCCESS, ERROR	StatusMessage	string	Will have either success or the appropriate error message in case of error.	Status Code	Status Type	Case	4006	ERROR	No Invoice to download for this Order	200	SUCCESS	Invoice generated successfully
Param	DataType	Description																						
StatusCode	int	Refer to the status code section below																						
StatusType	ENUM	SUCCESS, ERROR																						
StatusMessage	string	Will have either success or the appropriate error message in case of error.																						
Status Code	Status Type	Case																						
4006	ERROR	No Invoice to download for this Order																						
200	SUCCESS	Invoice generated successfully																						
Sample Request	https://<seller-domain>/v2/mynta/downloadinvoice/70063859																							
Success Response	Success response will return PDF byte array with http status code with 200.																							

Error Response	<pre> { "status": { "statusCode": 4006, "statusMessage": "No Invoice to download for this Order", "statusType": "ERROR" } } </pre>

Return

Return state transition diagram

Create Return

Endpoint	https://<seller-domain>/v2/return/{id}
Path Params	id - Return Id
Http Method	POST
Authentication	As per seller authentication rules
Description	To create returns/RTO in seller's system. This call should be idempotent . Any call repeated should give same response.
Request Body	JSON

Sample Request	<pre>{ "id": "123456", "type": "COURIER_RETURN/CUSTOMER_RETURN", "status": "CONFIRMED", "orderId": "56789", "createdOn": "2017-02-23 01:00:00", "items": [{ "sku": "seller_skuA", "quantity": 1, "reason": "return reason" }, { "sku": "seller_skuB", "quantity": 1, "reason": "return reason" }] }</pre>																																								
Request Object Explained	<table><thead><tr><th>parameter name</th><th>data type</th><th>description</th><th>Field Length</th></tr></thead><tbody><tr><td>id</td><td>String</td><td>Unique Identifier of Return.</td><td>24</td></tr><tr><td>type</td><td>Enum</td><td>COURIER_RETURN, CUSTOMER_RETURN describes return type PS: COURIER_RETURN is RTO</td><td>128</td></tr><tr><td>status</td><td>Enum</td><td>Specifies the status of this Return. Will always be CONFIRMED in this request.</td><td>128</td></tr><tr><td>orderId</td><td>String</td><td>Original order id to which this return belongs</td><td>20</td></tr><tr><td>createdOn</td><td>Date</td><td>Specifies the time at which this return was created</td><td></td></tr><tr><td>items</td><td>List<Items></td><td>Contains the list of items in this return</td><td></td></tr><tr><td>items[index].sku</td><td>String</td><td>Seller Sku code</td><td>128</td></tr><tr><td>items[index].quantity</td><td>Integer</td><td>Total return quantity of this sku</td><td>11</td></tr><tr><td>items[index].reason</td><td>String</td><td>Reason for the return of this sku</td><td>128</td></tr></tbody></table>	parameter name	data type	description	Field Length	id	String	Unique Identifier of Return.	24	type	Enum	COURIER_RETURN, CUSTOMER_RETURN describes return type PS: COURIER_RETURN is RTO	128	status	Enum	Specifies the status of this Return. Will always be CONFIRMED in this request.	128	orderId	String	Original order id to which this return belongs	20	createdOn	Date	Specifies the time at which this return was created		items	List<Items>	Contains the list of items in this return		items[index].sku	String	Seller Sku code	128	items[index].quantity	Integer	Total return quantity of this sku	11	items[index].reason	String	Reason for the return of this sku	128
parameter name	data type	description	Field Length																																						
id	String	Unique Identifier of Return.	24																																						
type	Enum	COURIER_RETURN, CUSTOMER_RETURN describes return type PS: COURIER_RETURN is RTO	128																																						
status	Enum	Specifies the status of this Return. Will always be CONFIRMED in this request.	128																																						
orderId	String	Original order id to which this return belongs	20																																						
createdOn	Date	Specifies the time at which this return was created																																							
items	List<Items>	Contains the list of items in this return																																							
items[index].sku	String	Seller Sku code	128																																						
items[index].quantity	Integer	Total return quantity of this sku	11																																						
items[index].reason	String	Reason for the return of this sku	128																																						
Response Format	<pre>{ "status": { "statusCode": 1006, "statusMessage": "Return created successfully", "statusType": "SUCCESS" } }</pre>																																								

Response Fields			
	Param	Data Type	Description
	Status Code	int	1006, 3001
	Status Message	String	Will have either success or the appropriate error message in case of error.
	Status Type	Enum	SUCCESS, ERROR
	Status Code	Status Type	Case
	1006	SUCCESS	Return created successfully
	3001	ERROR	Error while creating return

Update Return

Endpoint	https://<seller-domain>/v2/return/{id}/update
Path Params	id - Return Id
Http Method	PUT
Authentication	As per seller authentication rules
Description	To update return in Seller's system
Request Body	JSON
Sample Request	<div>Return Delivered<pre>{ "id": "123456", "type": "CUSTOMER_RETURN", "status": "DELIVERED" }</pre></div> <div>Return Cancelled<pre>{ "id": "123456", "type": "CUSTOMER_RETURN", "status": "CANCELLED" }</pre></div> <div>Return Ready For Pickup<pre>{ "id": "123456", "type": "CUSTOMER_RETURN", "status": "READY_FOR_PICKUP" }</pre></div>

Request Object Explained

parameter name	data type	description	Field Description
id	String	This field represents the unique Return Id. Identifier for Return Id.	24
type	Enum	COURIER_RETURN, CUSTOMER_RETURN describes return type	128
status	Enum	DELIVERED, CANCELLED, READY_FOR_PICKUP specifies the status of the return.	128

Response Format

```
{
  "status": {
    "statusCode": 1008,
    "statusMessage": "Return updated successfully",
    "statusType": "SUCCESS"
  }
}
```

Response Fields

Param	Data Type	Description
StatusCode	int	1008, 3002
StatusMessage	String	Will have either success or the appropriate error message in case of error.
StatusType	Enum	SUCCESS, ERROR

Status Code	Status Type	Case
1008	SUCCESS	Return update successfully
3002	ERROR	Error while updating return

Status Code Summary:

SUCCESS:

Status Code	Case
1000	Success
1001	Inventory processed successfully
1002	Inventory retrieved successfully
1003	Order updated successfully
1004	Items cancelled successfully
1005	Order retrieved successfully
1006	Discounts processed successfully
1009	Shipments verified successfully

ERROR:

Status Code	Case
401	Unauthorized
2000	Error
2001	Error updating inventory
2002	Error retrieving inventory
2003	Error updating discount
2004	Error updating order
2005	Operation already performed
2006	Invalid input
2007	Invalid sku
2008	Seller item info not found
2020	Error retrieving order
2031	Order line mismatch
2032	Order line quantity mismatch
2033	Order already acknowledged
2034	Seller mismatch
